- Scattered showers and thunderstorms will again be noted across the southern California mountains and deserts, Sierra, and northern mountains Tuesday. A few storms are also possible for far western portions of the Central Valley. Scattered showers and thunderstorms will linger over the Sierra and far northern mountains each day through midweek, with chances again increasing across southern California by late in the week.
 - Thunderstorms Tuesday across far northern California will bring a threat for dry lightning and gusty and erratic winds, yielding elevated to critical fire weather conditions over much of Siskiyou and Modoc Counties
 - Heavy rainfall is also possible with some storms through Tuesday, and may lead to localized flash flooding. The greatest threat for heavy rain Tuesday will be over the Sierra and across the Klamath Mountains and Modoc Plateau
 - Some localized burn scar impacts are also possible depending on the location of heaviest rainfall. At this time, there are no specific burn scars of most concern.
- Seasonable early August temperatures are expected for all areas through late week.

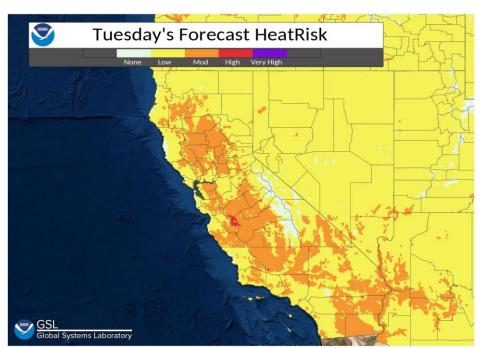

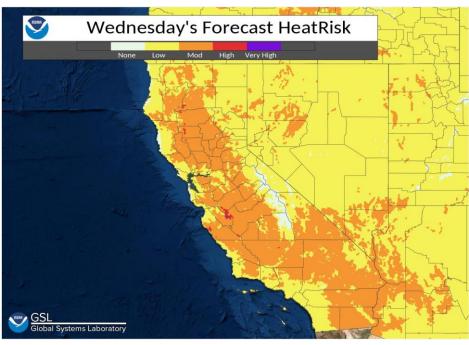

Important Note: Forecast precipitation amounts are an average for any particular location. Thunderstorms will produce locally much higher rainfall amounts.

Green	Level 0	No Elevated Risk
Yellow	Level 1	Low Risk for those extremely sensitive to heat, especially those without effective cooling and/or adequate hydration
Orange	Level 2	Moderate Risk for those who are sensitive to heat, especially those without effective cooling and/or adequate hydration

Red	Level 3	High Risk for much of the population, especially those who are heat sensitive and those without effective cooling and/or adequate hydration
Magenta	Level 4	Very High Risk for the entire population due to long duration heat, with little to no relief overnight
